

I drive a truck 48 states. Before XM radio, I had to dial the radio in each area to find a station to listen to and many areas have no radio broadcasting. Now I can follow NASCAR races, listen to the news, or decide to relax to the comedy stations or enjoy music. Those of us that travel the country are in need of this media.

It's a major assistance in bad weather to get the weather without having to (hopefully) locate a local radio station that happens to be broadcasting the weather. It helps us with traffic reports and lets us avoid a potential backup - thus making a problem less hazardous.

I pay for this service and should be allowed to keep it and listen to the channels I chose. Just like the homes that receive satellite dish TV or pay for cable, I can chose to listen to - or avoid - channels.

Please do not take this away from us. It is too important. For many of us that deliver all the goods that you purchase in stores, this is the ONLY form of entertainment we have. LEAVE IT ALONE!
